

Make Login Simple

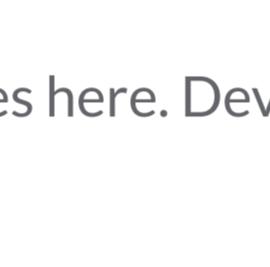

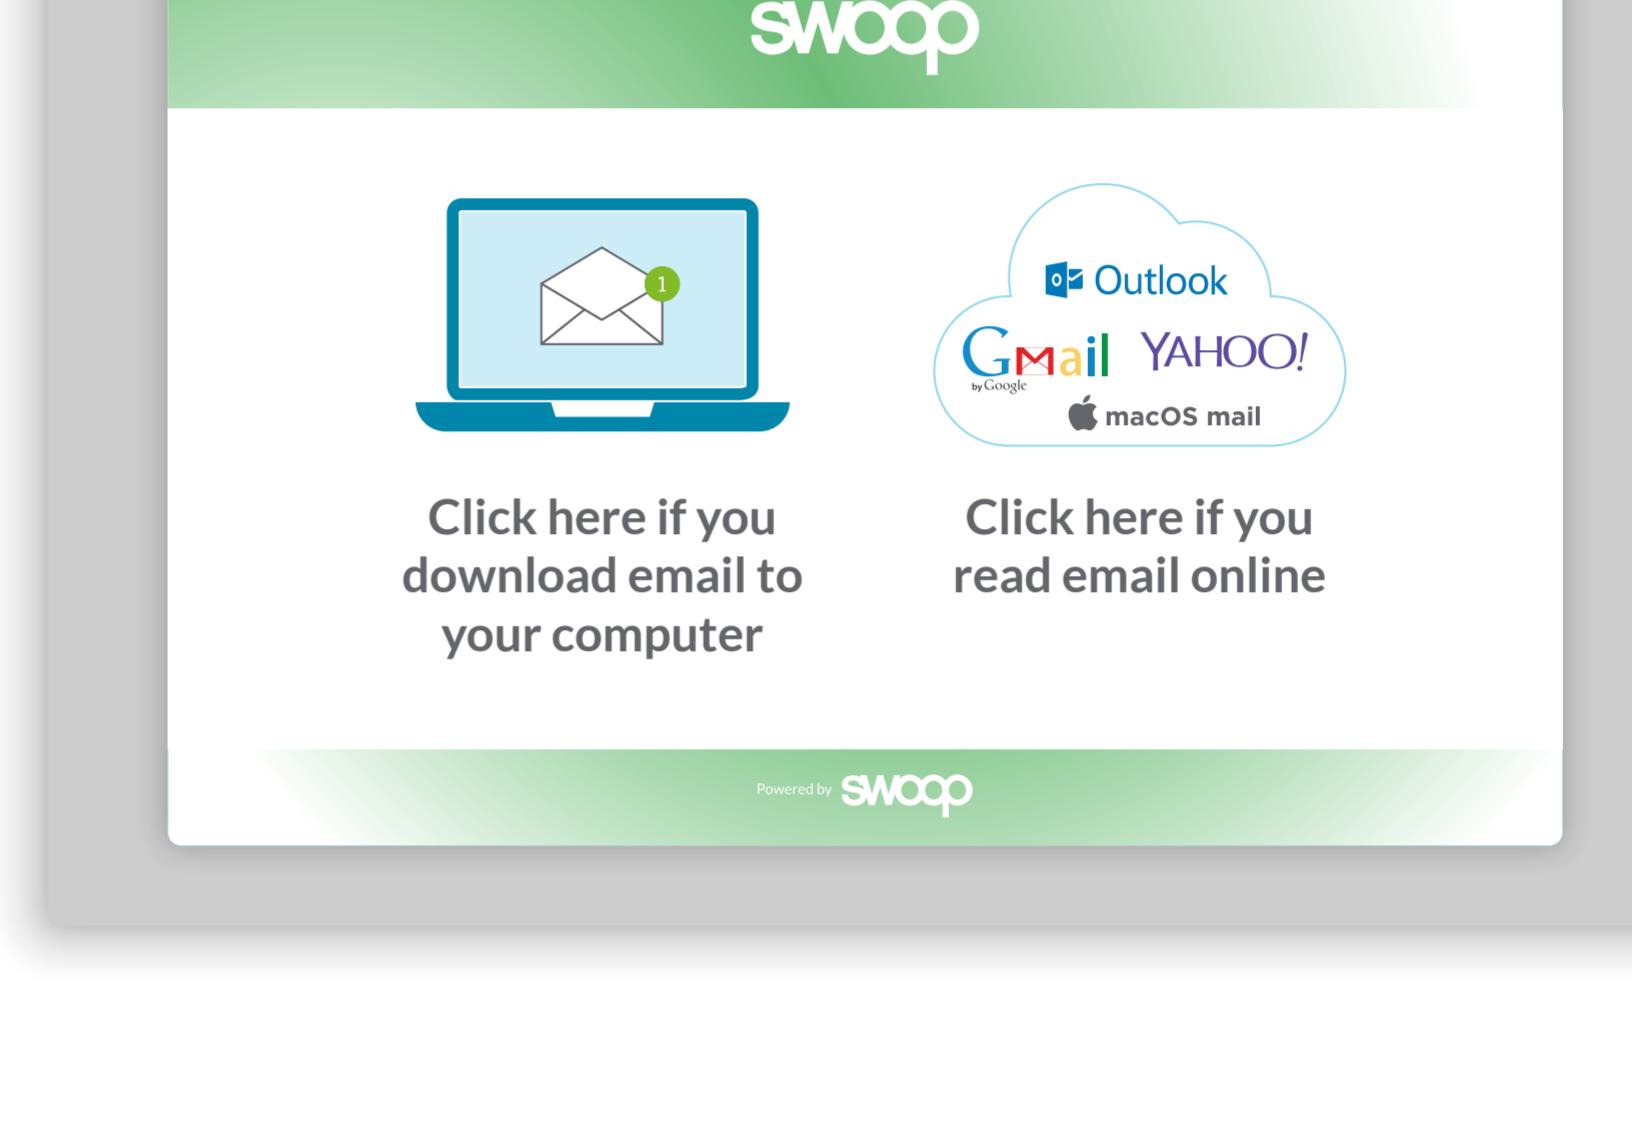

Every developer knows that easy to use applications are more likely to succeed. So why do most applications still make it hard to sign in? Simplifying your login is one of the most important upgrades you can make to your application. The industry is becoming more competitive, and companies that neglect to optimize their UX design will likely go out of business. Swoop is a powerful upgrade to your current password-based login.

```

1 // Require the Swoop library with a test secret key.
2 const swoop = require('stripe')('sk_test_BQokikJOvBil2HIWgH4olfQ2');
3 const moment = require('moment');
4
5 // Fetch the latest transactions from the Swoop account.
6 const transactions = (await swoop.balance.listTransactions({limit: 75})).data;
7
8 // Check what was the most recent transaction.
9 const latestTime = moment(transactions[0].created * 1000).fromNow();
10 console.log(`Latest transaction: ${transactions[0].type}, ${latestTime}`);
11
12 // Plot the evolution of the Swoop balance in USD over the latest transactions.
13 let balance = 0;
14 plot(transactions.map(txn => balance += txn.amount / 100));

```

Compatibility with all major emails

Safe and Protected

Swoop is a major security upgrade from password login. Swoop uses the 1024/2048 bit digital keys that are part of the DKIM standard to authenticate your user. This is state of the art encryption. See how it works for more details.

No More Passwords!

Good UX is about keeping it simple to use. Swoop allows users to create accounts and login with just a few taps of their finger. No annoying passwords to create and no keyboards to fumble around with. Pure bliss for the user means more business for you.
